

Sacks of Flour

1. A baker had 10 sacks containing the following amounts of flour:

$4\frac{1}{2}$ kg, $3\frac{1}{4}$ kg, $2\frac{1}{2}$ kg, $2\frac{1}{2}$ kg, 4kg,

$3\frac{1}{4}$ kg, $4\frac{1}{4}$ kg, 5kg, $2\frac{1}{2}$ kg, $3\frac{1}{4}$ kg

Plot the measurements on a line plot.

2. Give the line plot a title and label the axis.
3. If the baker redistributed the flour equally among the ten bags, how much flour would be in each bag? Explain your thinking.
